

ScanViS ID

GateGuard Series for Access Control

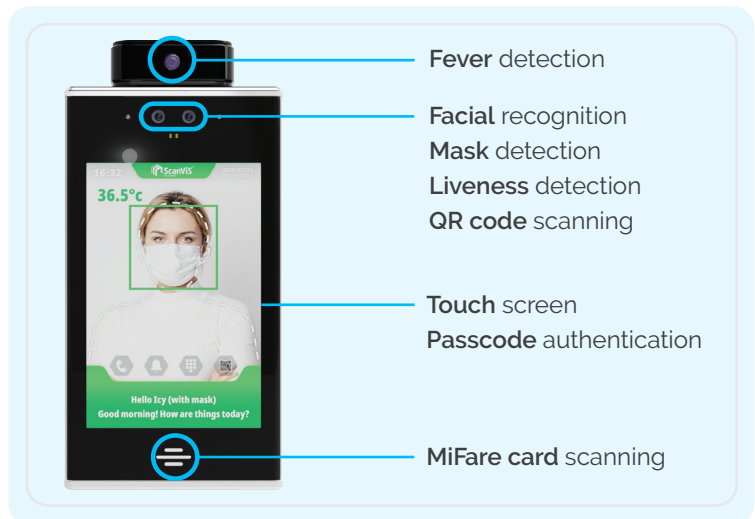

Powered by the world-leading facial recognition technology, **GateGuard Series** delivers reliable and safe access control solutions to both private and public sectors in the global market. This product series embraces different versions answering requests from light and quick roll out to large scale deployment involving software customization and system integration.

The all-in-one facial recognition device operates with a cloud computing platform to run ID management and perform real-time access monitoring of offices and buildings at the point of entry.

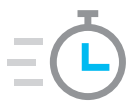

How can GateGuard help?

GateGuard series is a face-based authentication system to control door or gate access. It is designed to physically protect staff, visitors, residents, property assets and from unauthorized people.

GateGuard TH+

Identify face within **2 meters**

Detect face within **0.3 second**

50K face databases on a single device

Old photos compatible (Up to 10 years old)

1:N comparison

Embedded **facial feature** extraction

Welcome message to greet the guest

Batch ID management

Light source **calibration** (such as darkness or backlight)

Data **analytics** and **visualization**

Integration with **doors/gates**

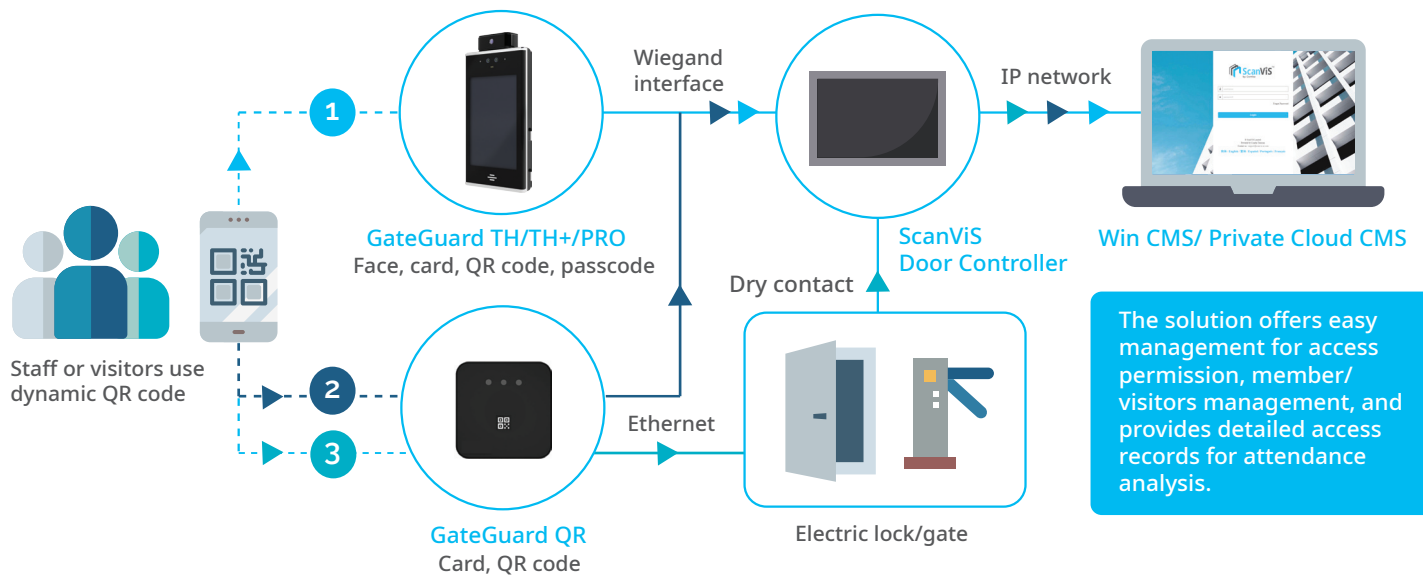

A next generation complete access control solution

ScanViS complete access control system creates safer, more secure spaces. Built to scale for thousands of users across multiple locations, ScanViS centralizes attendance, visitor management, and security management with robust cloud-based software and seamless integrations, all managed from a single pane of glass. RESTful API is available for 3rd party system integration both in ScanViS management platform and GateGuard devices.

ScanViS gives enterprises and organizations unprecedented visibility and control over all their locations, enabling them to do more with less investment.

Flexible enough to offer three methods to optimize access control management

Many organizations choose to use multi-factor authentication to boost the security of their access control systems. ScanViS can help enterprises design a multi-factor security feature to suit the organization such as Face + Passcode, Face + Card, or even Face + QR code or more.

The solution offers easy management for access permission, member/visitors management, and provides detailed access records for attendance analysis.

Key Benefits ScanViS Access Control Systems

1. A clear record of all entries and exits by all persons at all times
2. Secure private and confidential assets and data
3. Keep track of access log even during odd hours
4. Reduce theft, cloning, impersonation, and retain evidence
5. Keep track of device status

Capacity: 50K faces + 50K cards
Authentication method:
Face, card, QR code, passcode
Intercom system compatible
Dry contact: dual input and output
Power over Ethernet available

Authentication method: FR
Capacity: 1,500 faces
Dual camera
Dry contact: single output
