

# ScanViS ID Case Study

## GateGuard All-in-one System

Making facial recognition technologies accessible and affordable to enterprises and organizations

### Key Features

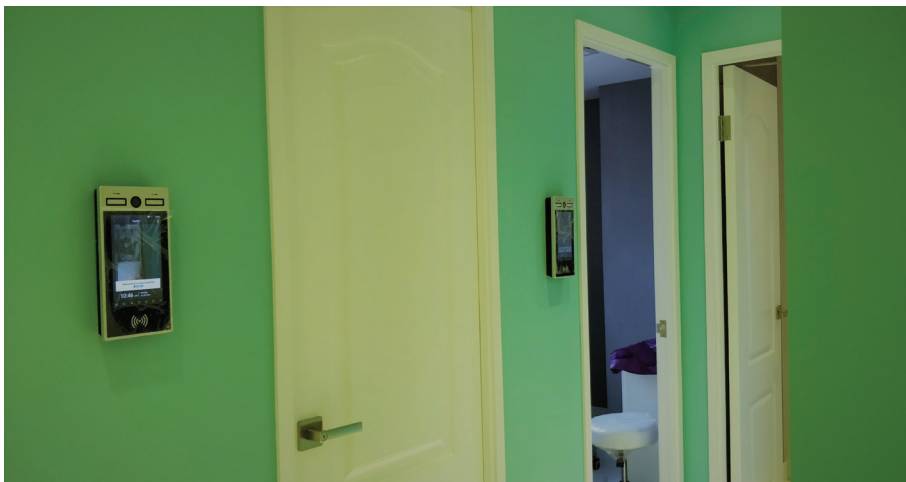

- Facial recognition
- IC/ID card reader
- 30K databases
- Wiegand interface
- Dry contact
- Wall mount/ gate integration

### Project requirement

An automatic and efficient staff registration system for roster monitoring at the service delivery points.

### How did GateGuard help?

GateGuard devices were installed at the beauty salon main entrance, and at each massage room entrance for staff register before delivering service to customers.

Flexible enough the devices come with an **embedded ID reader** for customer or visitor check-in.

Integrated with the customer booking system, all GateGuard devices in the salon are **centrally managed** by cloud server.

With GateGuard devices, the management of SonicMass Beauty Salon now have accurate staff attendance record for payroll calculation and enhance customer experience.
